DETAILED ACTION

1. This communication is in response to amendment filed 4/3/08.

Response to Amendment

2. Claims 1-13 have been canceled
3. Claims 14-61 are pending and are allowed.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance:

Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance:

Claims 14-61: The claimed invention pertains to method and apparatus for trading securities including stock options.

The following prior art references have been deemed most relevant to the allowed claim(s):

Horrington et al. (US 6,493,682) discloses a method of determining when to place an order, subject to uncertain execution, in exchange for better execution prices, an example of which is limit order trading in the U.S. equity market.

Lange; Jeffrey (US 6,321,212) teaches systems and methods for demand-based trading. More specifically, this invention relates to methods and systems for trading financial products

Art Unit: 3693

having demand-based adjustable returns, and systems and methods for determining those returns.

Patterson, Jr. et al (US 5,793,301 and US 5,774,877) discloses system which relates to computer-based techniques for transferring orders, quotes, and memos from a remote location to a floor broker on the floor of a financial exchange. The system provides assurances that instructions are noticed, timely processed, and faithfully followed regardless of the location of the floor broker on the trading floor.

Rickard et al. (US 6,016,483) teaches a computer-based system for determining a set of opening prices for a number of series of options traded on an options exchange and for allocating public order imbalances at the opening of trading. Market makers input a current position, a desired target position and market maker orders for options series from market maker terminals. An order entry system receives public orders for options series. A controller determines a set of implied volatilities (prices) for each options series that will maximize a weighted volume of trades across all option series at the opening. Contra orders that can be matched at the opening price are then executed.

FRASER et al. (WO 009826363A1) teaches a data processing system for implementing transaction management of auction-based trading for specialized items such as fixed income instruments which provides a highly structured trading protocol implemented through a sequence of trading paradigms. System proprietors in automated options and futures processing obtain data for quantifying and evaluating positions pursuant to trading option and futures contracts on individual securities.

Ronald J Blavers et al. "Autocorrelated Returns and Optimal Intertemporal Portfolio Choice", Management Science; Nov 1997; 43, 11; ABI/INFORM Global pg. 1537 discloses an explicit analytical solution to the dynamic portfolio problem of an individual agent saving for retirement (or other change of status, like the purchase of a house or starting college) is derived. Using a normal ARMA (1, 1) process, dynamic programming techniques combined with the use of Stein's Lemma are employed to examine dollar-cost- averaging and age effects in intertemporal portfolio choice with CARA preferences.

All claims: The aforementioned references as discussed above as the Closest Prior art of record fails to teach or suggest or render obvious a system (claims 14-19) which comprises an electronic order flow provider which generates an option order and an electronic drop system connected to the order flow provider that receives a copy of the option order at

Art Unit: 3693

substantially the same time as a market which is in communication with the electronic order flow provider receives the option order from the electronic order flow provider and the electronic drop system submits a contra-order based on the option order to the market for fulfillment.

System claims 55-61 are allowed based on similar reasoning as system claims 14-19.

Claims 20-34 are allowed because they recite the underlying process of system recited in claims 14-19.

Claims 35-54 are allowed because the aforementioned references as discussed above as the closest Prior art of record fails to teach or suggest or render obvious a method of trading which comprises automatically submitting a contra-order to at least one a first server and a second server within the market for fulfillment where the contra-order is based on an order submitted to the first server from an electronic order flow provider.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
